Education

BA in Game Design and Programming

Aug 2023 - Jun 2026

Uppsala University

Projects

Access Acquired 

Mar 2025 - Jun 2026

3D hack-and-slash developed in Unreal Engine. Won 'Best Level Design Award' at GGC 2025. Released as a demo on Steam in June 2026.

- Implemented core game systems for player & enemy combat, dialogue systems, AI-driven encounters, and game persistence.
- Multilevel layered UI with dynamic button prompts and full gamepad support.
- Data-driven enemy management and spawn-systems, custom slate UI and editor tools.

Gameplay System Module

Jun 2025 - Jun 2026

Solo project creating a framework for prototyping and creating gameplay. Inspired by GAS.

- Allows any Actor to possess activatable abilities, gameplay attributes & tags and temporary effects.
- Save system framework for any Actor that works with level streaming. Binary serialization and file compression that handles any pointer, UPROPERTY or regular C++ type.

Networked Tank Battles

Sep 2025 - Nov 2025

Networked tank shooter game developed in C++ using Raylib.

- Custom virtual connection protocol using UDP with an authoritative server solution.
- Handles networking challenges such as packet loss and latency using interpolation, client-side prediction and reconciliation.
- Designed my own game engine and created custom solutions to physics, object management and communication while gracefully handling networked connections.

Krax Ca-caw's Concoction Chaos

Mar 2024 - Nov 2024

Potion-making arcade game in Unity published on Steam in November 2024. Won the 'Best Arcade Game Award' at GGC 2024.

- Unique input system using color-detection through a camera.
- Steam functionality such as achievements and statistics. Published builds and updates through Steamworks SDK.
